

GRADE 7: SCIENCE CURRICULUM FRAMEWORKS

UNIT 1: NATURE OF SCIENCE				
Big Questions		Formative/ Summative Assessments		
<ol style="list-style-type: none"> 1. What challenges have scientists encountered as they presented their work? 2. How do scientists design a controlled experiment? 3. How do scientists use evidence to support conclusions? 4. How do scientists use tools to get data and keep themselves safe? 		Formative and summative assessments created by teachers/teams Options include, but are not limited to: <ul style="list-style-type: none"> • Nature of Science Paper/Pencil Test • Lifesaver Lab • Formative Assessment: Check for Understanding Observation vs. Inference • Nature Journals 		
Substrand/Standard	Curriculum Benchmark	MCA III Test Item Specifications	Standards of Proficiency Description of what students must show to demonstrate proficiency (created by teachers/teams)	Resources
<u>Substrand:</u> The Practice of Science <u>Standard:</u> Understand that science is a way of knowing about the natural world and is characterized by empirical criteria, logical argument and skeptical review.	Understand that prior expectations can create bias when conducting scientific investigations. (For Example: Students often continue to think that air is not matter, even though they have contrary evidence from investigations.) (7.1.1.1.1)	<ul style="list-style-type: none"> • Items may address common preconceptions of middle level students. • Items assessing this benchmark may also assess benchmark 7.1.1.2.4. 		
<u>Substrand:</u> The Practice of Science <u>Standard:</u> Understand that science is a way of knowing about the natural world and is characterized by empirical criteria, logical argument and skeptical review.	Understand that when similar investigations give different results, the challenge is to judge whether the differences are significant, and if further studies are required. (For Example: Use mean and range to analyze the reliability of experimental results.) (7.1.1.1.2)	<ul style="list-style-type: none"> • Items may require students to compare statistical data from different investigations. • Items will NOT require students to make statistical calculations. • Statistics provided will be limited to mean, median and range. • Items may include qualitative or quantitative data. • Items may include graphs and tables to represent investigation results. • Items will NOT include the terms reliability and validity.

GRADE 7: SCIENCE CURRICULUM FRAMEWORKS

UNIT 5: GENETICS

UNIT 5: GENETICS				
Big Questions		Formative/ Summative Assessments		
		Formative and summative assessments created by teachers/teams		
<ul style="list-style-type: none"> • What is the relationship between DNA, genes and chromosomes? • How do parents pass traits on to offspring? • How do scientists use pedigree charts and punnett squares to predict the likelihood that offspring will inherit certain traits? • How does the environment affect inherited traits? 		Options include, but are not limited to: <ul style="list-style-type: none"> • Formative Assessments: Check for Understanding (vocabulary) and Create Your Own Punnett Square Problems • Genetic Vocabulary Story • Pedigree Assignment • Paper/Pencil Test • Nature Journals 		
Substrand/Standard	Curriculum Benchmark	MCA III Test Item Specifications	Standards of Proficiency Description of what students must show to demonstrate proficiency (created by teachers/teams)	Resources
<u>Substrand:</u> Evolution in Living Systems <u>Standard:</u> Understand that reproduction is a characteristic of all organisms and is essential for the continuation of a species. Hereditary information is contained in genes which are inherited through asexual or sexual reproduction.	Recognize that cells contain genes and that each gene carries a single unit of information that either alone, or with other genes, determines the inherited traits of an organism. (7.4.3.1.1)	<ul style="list-style-type: none"> • Items will NOT use the terms chromosome, phenotype, genotype, dominant or recessive. • Items will NOT require students to understand or use a Punnett square. 		Holt “Science and Technology Cells, Heredity and Classification”
<u>Substrand:</u> Evolution in Living Systems <u>Standard:</u> Understand that reproduction is a characteristic of all organisms and is essential for the continuation of a species. Hereditary information is contained in genes which are inherited through asexual or sexual reproduction.	Distinguish between characteristics of organisms that are inherited and those acquired through environmental influences. (7.4.3.1.3)	<ul style="list-style-type: none"> • Items will provide relevant background information. • Items may address how some inherited traits can also be affected by the environment. For example, mutations caused by pollution, organism height, leaf number, leaf color. • Additional vocabulary may include terms such as instinctive, behavioral and learned characteristics. 		Holt “Science and Technology Cells, Heredity and Classification” McDougal Littel “Life Science”
<u>Substrand:</u> Human Interactions with Living Systems <u>Standard:</u> Understand that human activity can change living organisms and ecosystems.	Describe examples where selective breeding has resulted in new varieties of cultivated plants and particular traits in domesticated animals. (7.4.4.1.1)	<ul style="list-style-type: none"> • Items will provide relevant background information on traits found in the plants and animals. 		

GRADE 7: SCIENCE CURRICULUM FRAMEWORKS
